

## **Customer Check-In (May 16, 2022)**

During this check-in, we discussed more about our Role ideas with the client. The idea was met with interest, but the client did bring up that they don't want to spend a lot of time sorting and working as an admin; they are an orchestra first and foremost. This would mean that it would be important for implementation of this system to be something that an admin can accomplish in a short amount of time.

We also brought up the idea of using third-party software/frameworks. While the idea was met with approval, further research and practice into WordPress may prove third-party software inefficient.

The music distribution was a heavily discussed topic. In addition to uploading the music in video format, the idea of attachments was brought up. Ideally, this system would function as a way to attach sheet music to the video of the song. This would allow for more convenience for the user. Additionally, this would also combine the previously two divided sections into one easy-to-use section.

A system to upload recordings of practices and rehearsals was also discussed. We asked the RMO if they trusted their members enough to allow anyone to upload recordings they had of the rehearsals or if they would like it to be moderated by an admin. They said that as long as it would be easy to delete them, they would be fine leaving it open to all members.

A question was also posed as to if all members should be allowed access to contact information for all other members. They said that since this is how it is on their current website, it should be fine to expose that information to all members.
